Section 1 Phase 1 CAP/ER and Phase 2 CAP/ER

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... A summary of compliance with and activities related to implementation of the Phase 1 CAP/ER and Phase 2 CAP/ER, including the status of construction projects in comparison to the schedules that have been established pursuant to the Consent Decree for those projects; and schedule deadlines and milestones achieved during Calendar Quarter and expected during next Calendar Quarter."

KUB began developing a Corrective Action Plan/Engineering Report (CAP/ER) in January 2004, following the completion of the Phase I Sanitary Sewer Overflow Evaluation Report (SSOER) required by the Agreed Order with the Tennessee Department of Environment and Conservation (TDEC) and, subsequently, the Consent Decree. The objective of the Phase I CAP/ER is to identify facility improvements needed to address the conditions causing SSOs occurring in the collection system during the period of 2001–2004 with the goal of eliminating the SSO locations on the Long-Term List and to support future growth needs. KUB submitted the Phase 1 CAP/ER to EPA on October 28, 2005. Comments were received from EPA on February 23, 2006. Per EPA's letter, KUB submitted a 30-day response to EPA's comments on March 27, 2006. The Revised Phase 1 CAP/ER was submitted to EPA on May 22, 2006, and subsequently approved by EPA on June 30, 2006. All work necessary to meet the objectives of the Phase 1 CAP/ER will be completed by June 30, 2013. The Phase 2 CAP/ER was submitted to EPA on September 9, 2009, and approved on March 22, 2010. All work necessary to meet the objectives of the Phase 2 CAP/ER will be completed by FY 2015.

Capital Improvement Plan for FY 04/05 – FY 12/13

The following is a list of facility improvement projects included in the Capital Improvement Plan for fiscal years 04/05 to 12/13. These projects were in various stages during the reporting period, including preliminary engineering, design, construction, and completion. Many of these projects are "find and fix" rehabilitation projects. Find work is defined as the inspection (i.e. flow monitoring, CCTV, manhole inspections, smoke testing, etc.) and design phase of the project. Fix is defined as the construction phase that may include manhole rehabilitation/replacement, main line rehabilitation/replacement, and lower lateral rehabilitation/replacement. Other projects are trunkline capacity improvements or wet-weather storage. Each of these projects is considered part of the overall Phase 1 CAP/ER.

Phase I CAP/ER Ongoing Projects

Third Creek

1. 3-6 Interstate 40 and Middlebrook Pike Trunk Replacement Project (East Fork of Third Creek Trunk Replacement) – Constructability issues, property acquisitions, and permitting for this large diameter project required that the project completion date be extended until FY 12/13. The project conditions are along commercial, industrial, and transportation (roadway and railroad) corridors with challenging topography. Project will require coordination with future TDOT road improvement projects, extensive railroad permitting, environmental permitting, and property acquisition. The project has been broken into three phases to provide more effective delivery. Phase I, which consisted of the replacement of 3,200 ft of 30" pipe with 36" pipe, is complete. Major milestones this quarter will be starting work on the new chlorine contact tank and wet-weather screening structure.

Section 3 Process Controls Program

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... A summary of implementation of and compliance with the Process Controls Program."

The Process Controls Program (PCP) was initiated 14 times during this reporting period but did not result in any Diversion events.

Section 4 Capacity Assurance Program

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... A summary of the implementation of the Capacity Assurance Program for that Calendar Quarter, including the number of, and anticipated flow from, sewer connections that have been authorized, by Sewerbasin, a description of the projects that have been authorized and the number of credits earned and banked by KUB that will be expended for those projects, by Sewerbasin, and any exceptions granted for connections for essential services."

The Capacity Assurance Program (CAP) was submitted to EPA for review on February 8, 2006. EPA reviewed and approved the program on April 7, 2006. KUB started reviewing building permits based on the approved CAP on June 6, 2006, which was within the 60-day timeframe for implementing the program after receiving EPA approval.

To review building permits more efficiently using the CAP criteria agreed on with the EPA, KUB worked with a consultant, Camp, Dresser, & McKee, to develop an Information Management System (IMS). The IMS assists KUB in managing the CAP program by determining the amount of wastewater each proposed building would add to KUB's wastewater system based on its location. The IMS also helps track rehabilitation credits that KUB earns through its CAP/ER and Management, Operations, and Maintenance (MOM) programs.

Appendix A includes a list of capital projects that KUB performed to gain rehabilitation credit in its sewer system. As stated in the Consent Decree, the list of authorized sewer connections was maintained and updated as necessary until full implementation of the CAP as approved by EPA. Therefore, the list will no longer be included as part of this quarterly report.

There were no exceptions granted for connections for essential services during this reporting period.

Section 5 Transfers of Ownership

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... Identification of any transfer of an ownership interest, operation, management, or other control of the Treatment Works, or any portion thereof."

There has been no transfer of an ownership interest, operation, management, or other control of the Treatment Works, or any portion thereof, during this reporting period.

Section 6 Compliance and Non-Compliance With the Consent Decree

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain...A description of the status of compliance or non-compliance with the requirements of this Decree and, if applicable, the reasons for non-compliance, including a list of all violations that are subject to stipulated penalties under Section X of this Consent Decree."

6.1 Submission of Deliverables

To date, KUB has submitted all deliverables in accordance with the schedule set forth in the Consent Decree. The following sections detail all activity related to deliverables that occurred during the past quarter. Also noted are the dates each submittal was available for public comment in the Public Document Repository (PDR), when the deliverable was submitted to EPA, when EPA responded with comments, when KUB responded to those comments, and when EPA approval was received.

6.1.1 Quarterly Progress Report Third Quarter 2012

Consent Decree language, pages 82-83: "Beginning thirty (30) Days after the first Calendar Quarter following the Date of Entry, and thirty (30) Days after each Calendar Quarter thereafter until termination of the Consent Decree, KUB shall submit to the Parties, and simultaneously place in the PDR, a Quarterly Progress Report."

On October 29, 2012, KUB submitted to EPA and placed in the PDR the Quarterly Progress Report for the third quarter 2012. This deliverable was not subject to the Public Review Requirement of Section VI.A.2, but was available for public comment from October 29, 2012, until November 19, 2012. No comments were received during that period.

6.2 Violations Subject to Stipulated Penalties

During this reporting period, KUB incurred four Unpermitted Discharges. Table 1 below lists all violations subject to stipulated penalties as outlined in the Consent Decree. Appendix E lists any SSO that occurred during the fourth quarter 2012 that resulted in an unpermitted discharge along with its cause, volume, one- and three-day rainfall totals, and rainfall intensity.

Section 7 SSOs, Bypasses, Diversions, and Effluent Limit Violations

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... A spreadsheet and summary of all SSOs, Bypasses, Diversions, and effluent limit violations that occurred during the previous Calendar Quarter. Information on Building Backups may be provided in separate spreadsheets and summaries from other SSOs. The spreadsheets and summaries shall identify:

- c. For all effluent limit violations, all information required to be reported on KUB's Discharge Monitoring Reports."

7.1 SSOs

Appendix B lists all SSOs that occurred during this reporting period. During this period, there were 22 SSO events. Of that number, ten were due to blockage, five were due to grinder pump failure, four were due to broken pipe, two were due to construction failure, and one was due to heavy rainfall.

Of the 22 SSO events, 18 were in the 0 - 1,000 gallons volume range, three were in the 1,001 - 10,000 range, and one event totaled greater than 10,000 gallons. Durations for events during this period are as follows: 18 ranged from 0 - 2 hours, three ranged from 2.1 - 5 hours, and one event was greater than five hours.

7.2 Building Backups

Appendix C lists all Building Backups that occurred during this reporting period. During this period, there were eight Building Backups. Four of those events were due to construction failure, three were due to blockage, and one event was due to grinder pump failure.

7.3 Bypasses

All Bypasses that occurred during this reporting period were in compliance with the Process Controls Program. For purposes of this report, any Bypass in compliance with the Process Controls Program shall be referred to as a "Diversion" (see below). All Bypasses not in compliance with the Process Controls Program shall be referred to as a "Bypass."

Table 2 contains all Diversion event information that occurred during this reporting period. During this reporting period, there were no Diversion events at Kuwahee, Fourth Creek, Loves Creek, or Eastbridge. No Bypasses occurred during this reporting period.

7.4 Effluent Limit Violations

Table 3 contains all effluent limit violations that occurred during this reporting period. The table contains the information as it is reported in KUB's Discharge Monitoring Reports. During this reporting period, there were no Effluent Limit Violations for Kuwahee, Fourth Creek, Loves Creek, or Eastbridge WWTPs.

Section 8 Water Quality Monitoring Data

Consent Decree language, pages 82-83: "Each Quarterly Progress Report shall contain... The water quality monitoring data and other information required pursuant to Section VII.D.1.(e).(v)."

8.1 Sampling Conducted and Results

Appendix D lists all sampling that was conducted during this reporting period and the results thereof. In addition to routine monitoring in all creeks, and responding to Sanitary Sewer Overflows (SSOs), KUB Water Quality Personnel conducted some investigative sampling in Goose Creek. KUB continues to use RT-PCR Bacteroides analysis if necessary to investigate the source of any high *E. coli* counts that reoccur.

First Creek

All of the bacteriological results associated with the routine monitoring for First Creek (Routine Water Quality Monitoring Report – Appendix D) were below the water quality standard of 941cfu/100 ml, except for two samples taken during wet-weather conditions on 11/7/12. Runoff brings potential contamination from other sources into the stream and likely contributed to the high counts observed on this date. No other samples for the quarter were above the limit. No investigation is warranted.

Second Creek

The one routine sample that had an *E. coli* result slightly above the water quality standard of 941cfu/100 ml was collected on 12/17/12 when the area had received nearly two inches of rain within the day of and prior to sampling (Routine Water Quality Monitoring Report – Appendix D). It is probable that contamination from storm runoff contributed to the high count observed on this date.

Third Creek

There were no samples for this quarter that had an *E. coli* result above the water quality standard of 941cfu/100 ml (Routine Water Quality Monitoring Report – Appendix D). Investigative sampling for this creek is not necessary.

Fourth Creek

There were some *E. coli* results above the water quality standard for monitoring done on Fourth Creek during this quarter (Routine Water Quality Monitoring Report – Appendix D). These results were obtained on 10/15/12 and 12/18/12 when a significant amount of rain fell. Due to runoff, the rainfall likely produced these high counts. Investigative sampling is unnecessary at this time.

Loves Creek

The bacteriological results associated with the routine monitoring for Loves Creek (Routine Water Quality Monitoring Report – Appendix D) have been below the water quality standard of 941cfu/100 ml for some time. That continues to be the case this quarter with no high counts to report.

Williams Creek

There were two dates for this quarter that had *E. coli* results above the water quality standard of 941cfu/100 ml for Williams Creek (Routine Water Quality Monitoring Report – Appendix D). They were both sampled on days that were associated with heavy rainfall, 10/8/12, and 12/11/12. The source of possible contamination is being investigated because of the results obtained in the last two quarters.

Baker Creek

There were three routine samples taken on 10/22/12 and 12/4/12 that were slightly above the water quality standard of 941cfu/100 ml (Routine Water Quality Monitoring Report – Appendix D) for Baker Creek. KUB has investigated this area of the creek in the past because of elevated counts observed in previous quarters along a tributary that enters the stream at mile 0.36. Two of the three samples that were above the water quality standard were sampled at this site. The tributary is small and dries up during warm and dry weather. Since these count elevations are inconsistent and seen primarily during wet weather near this tributary in this largely residential area, a leaking septic system or defective private lateral is suspect. Baker Creek data continues to be reviewed closely.

Goose Creek

There was one routine sample for this quarter that had an *E. coli* result slightly above the water quality standard of 941cfu/100 ml (Routine Water Quality Monitoring Report – Appendix D). The sample was taken at Site 1.19E, which is currently under investigation (Table 1 – Appendix D). *E. coli* results above the water quality standard of 941cfu/100 ml have been obtained during both wet- and dry-weather conditions near Site 1.19E in the past. The area upstream and near site 1.19E is currently being investigated to determine the potential source of the contamination. More monitoring of nearby tributaries will continue as the "right fork" of the stream above Site 1.19 has recently had some higher counts during wet weather.

Spill Impact Monitoring

In addition to the Spill Impact Report in Appendix D, there was some additional sampling that was conducted this quarter in association with overflows that did not reach the Waters of the State. One of the overflows was determined to be associated with a private lateral failure rather than a wastewater system issue. These results are included in Table 2 – Appendix D and confirm there were no impacts to nearby waterways.

8.2 Projected Data Collection

During the first quarter of 2013, KUB will continue to monitor the 24 routine sampling locations in the sewer basins of eight area creeks. KUB will collect samples from the following locations during the first quarter of 2013:

Creek Name	Creek Mile #	Creek Mile #	Creek Mile #

Fourth Quarter 2012 Unpermitted Discharge Data and Analysis

Appendix E lists any SSO that occurred during the fourth quarter of 2012 that resulted in an unpermitted discharge along with its cause, volume, one- and three-day rainfall totals, and rainfall intensity.

Of the four unpermitted discharges that occurred during the fourth quarter of 2012, two were due to blockage, one was due to construction failure, and one was due to a broken force main. The table below summarizes unpermitted discharges listed in Appendix E for this quarter that were impacted by factors that were difficult to control or events that had minimal impact on the environment due to their low volume.
