Project Information Sheet

KUB Set to Upgrade Utility Service in Northwest Knoxville with New Electric Substation on Western Avenue

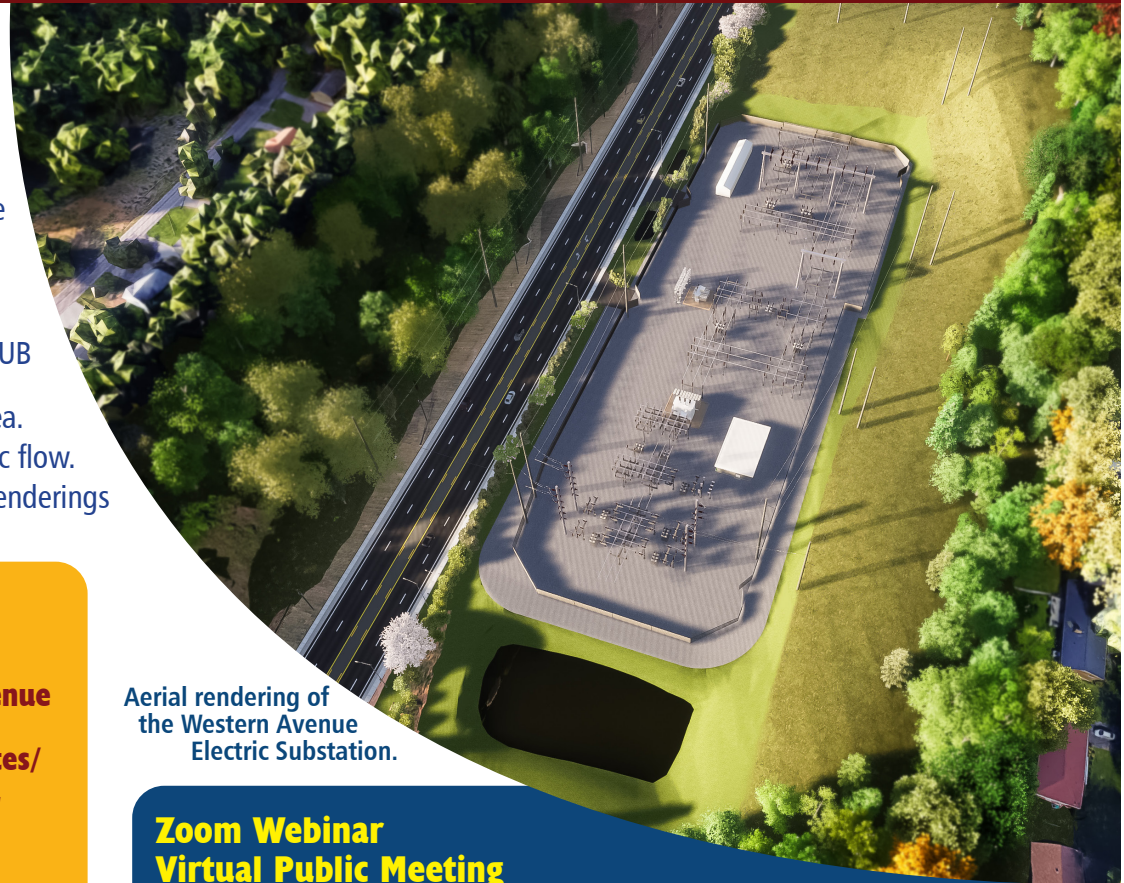

KUB, in partnership with TVA, is set to construct a new electric substation on the north side of the roadway at 5983 Western Avenue, just west of the Cumberland Estates Shopping Center.

Site preparation work is set to begin later this summer, followed by substation construction starting in summer 2022.

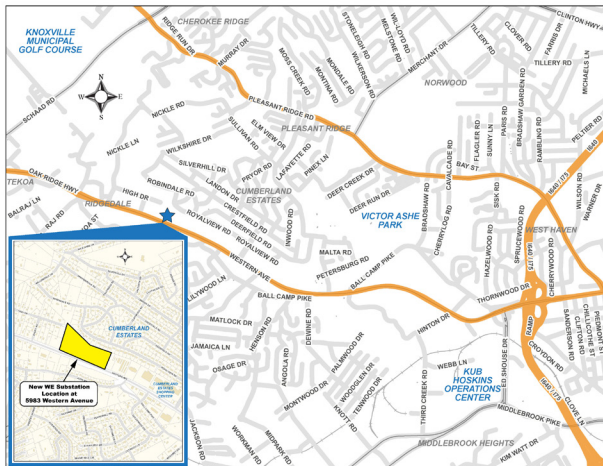

The new substation will provide system flexibility. Additionally, it will allow KUB to continue important Century II infrastructure upgrades at the three existing electric infeed substations and overhead transmission lines that serve this area.

This project will be confined to KUB property with minimal impacts to traffic flow.

See page two of this document for additional information and substation renderings from different angles.

Project Communication

KUB is committed to keeping its customers and the general public informed about utility projects that may impact the surrounding landscape and commuter routes.

KUB will send out notices to the immediate area via postcard mailers prior to the public meeting and the start of construction. Information will also be posted on the **Nextdoor** social networking app for neighborhoods.
